<https://aktarportfolio.vercel.app>

Summary

Software Engineer with experience building asynchronous APIs, real time analytics systems and cloud native backend infrastructure. Internship experience at IIT Dharwad building NLP data pipelines and multilingual deep learning workflows for speech translation systems.

Technical Skills

Language: Python, SQL, C++, TypeScript

Frameworks: FastAPI, Django, NestJs, Pandas, NumPy

Cloud & Tools: AWS, GCP, Docker, PostgreSQL, Git, MLflow, SQLAlchemy, LangChain, LangGraph

Experience

Research Intern

Feb - Sep 2024

IIT Dharwad

- Built and optimized NLP based speech translation pipelines for Hindi English datasets using PyTorch deep learning workflows and multilingual sequence modeling techniques.
- Developed scalable and reusable data preprocessing pipelines including tokenization, manifest generation, clustering and multitask dataset preparation workflows for efficient analysis and interpretation.
- Trained and fine tuned wav2vec, HuBERT & HiFi-GAN models, improving BLEU and F1 evaluation scores by 40%
- Used Docker based environments to maintain reproducible development workflows and supported troubleshooting across multiple Ubuntu systems.

Certification

- [AWS Certified Solutions Architect](#) – Associate (SAA-C03) Feb - May 2025
- Participated in [Google and AWS hackathons](#) focused on Cloud, AI and Backend engineering Sep - Dec 2025

Projects

F1 Race Prediction

Feb - Apr 2026

Personal Project

- Built an event driven backend orchestration layer with scheduled qualifying/race ingestion, idempotent database upserts and automated prediction synchronization pipelines, eliminating manual race weekend operations.
- Engineered an automated race intelligence pipeline covering 7 years F1 datasets with scheduled qualifying ingestion every 6 hours and predict using XGBoost.
- Developed an ML observability workflow tracking real race prediction accuracy across entire seasons using MLflow, Supabase, and automated prediction logging.

Stock Analysis

Apr 2026 – Present

Personal Project

- Built a financial intelligence engine combining 4-source market ingestion, 7+ technical indicators, and anomaly detection models to identify statistically abnormal stock movements across 10+ equities.
- Designed a hybrid relevance-ranking system using 384-dimensional embeddings, temporal causality scoring, and SEC EDGAR anchoring to connect market events with contextual financial news.
- Engineered retrieval and reasoning pipelines using PostgreSQL, pgvector and Strands agents with structured tool calling, MCP orchestration processing workflows.

Extracurricular Activity

- Won 2-time National Karate Champion title and qualified to International Karate Championship held in HongKong.
- Organized fundraising campaign raising over Rs.50K to provide shelter and medical care for 100 stray dogs and cats.
- Volunteered for organizing coding workshops and tech talks at KLE University, collaborating with teams and stakeholders.

Education

KLE Technological University [7.1 CGPA]

2024

Bachelor of Engineering in Electronics and Communication

Hubli, Karnataka
